WORK EXPERIENCE

Ethara AI

Apr 2026 – Jun 2026

LLM Trainer Intern

- **Model Optimization:** Spearheaded the training and post-training optimization phases for large-scale language models, enhancing contextual understanding and generation accuracy.
- **Dataset Engineering:** Curated, filtered, and structured high-quality datasets for model training, helping reduce bias, improve consistency, and mitigate hallucinations.
- **Flux AI Integration:** Collaborated on core training pipelines for the Flux AI framework, applying rigorous evaluation and reinforcement strategies to ensure robust output quality.

Doosra College

Jul 2023 – Sep 2023

Django Developer Intern

- **System Development:** Developed a comprehensive Inventory Management System using a Django backend and SQL database to streamline stock tracking and logistics.
- **Database Optimization:** Engineered optimized SQL queries and indexing strategies, resulting in a 60% improvement in data retrieval latency for high-traffic modules.
- **Analytics Integration:** Collaborated with cross-functional teams to integrate analytics dashboards into the system for better operational decision-making.

PROJECTS

Study AI

- **Personalized Planner Engine:** Developed an intelligent study platform utilizing the Gemini API that processes user-uploaded notes to generate custom study plans tailored to specific topics, learning speeds, and time constraints.
- **Multi-Source Content Processing:** Integrated LangChain and the YouTube Transcript API to extract key concepts from book PDFs and videos, automatically summarizing lecture data into structured personal notes.
- **Contextual Knowledge Retrieval:** Implemented Semantic Search across processed documents and videos, allowing users to interactively chat with their custom learning materials for high-accuracy, real-time contextual insights.
- **Tech Stack:** Python, LangChain, Gemini API, YouTube Transcript API, Semantic Search, NLP, HTML, CSS, JavaScript, [GitHub](#)

FaceMask Detection

- **Computer Vision Classifier:** Built a CNN-based face mask classifier (~81% accuracy) featuring real-time webcam detection via OpenCV.
- **Data Pipeline:** Utilized PyTorch pipelines, data augmentation, and evaluation metrics such as precision, recall, and F1-score.
- **Tech Stack:** Python, PyTorch, OpenCV, [GitHub](#)

VividChat

- **WebRTC Architecture:** Created a real-time video calling app utilizing a Django backend and WebRTC for direct peer-to-peer connections.
- **Scalable Signaling:** Integrated Socket.io signaling to support group calls, text chat, and enhanced room handling for stable, low-latency performance.
- **Tech Stack:** Django, WebRTC, Socket.io, Python, HTML, CSS, JavaScript, [GitHub](#)

TECHNICAL SKILLS

- **Languages:** Java, Python, C++, SQL
- **Web Frameworks:** Django, Spring Boot, FastAPI
- **AI/ML & LLM:** LangChain, PyTorch, OpenCV, Scikit-learn, RAG, Prompt Engineering, LLM Evaluation, Fine-Tuning
- **Databases & Cloud:** MySQL, MongoDB, AWS
- **Tools & Methodologies:** Git/GitHub, WebRTC, Socket.io, Semantic Search

EDUCATION

Guru Gobind Singh Indraprastha University

Delhi, India

- **Master of Computer Applications (MCA) – JIMS** | CGPA: 7.6 | Jun 2026
- **Bachelor of Computer Applications (BCA) – SGTBIMIT** | CGPA: 7.7 | Jun 2024

CERTIFICATIONS

- **Specialized Program in Artificial Intelligence & Machine Learning with Drone Tech** – TiHAN, IIT Hyderabad
- **Java Programming Masterclass** – Udemy
